62 X 62 IN. FRAME & DOT FILTER ASSEMBLY WITH SQUARE BASE

Inlet Protection

The Silt Saver Frame and Filter Assembly is a drop-inlet protection device designed to prevent sediment and trash from entering the inlets of a stormwater system. It is made of a durable, reusable polyethylene frame with a replaceable filter.

- Superior sediment filtration in slurry conditions
- Stage 1 – Sediment filtration (exceeds 96% efficiency)
- Stage 2 – High-flow fabric top for stormwater release
- High visibility top marks inlet location

PIPE STOPPER WITH 2-STAGE FILTER

Sediment Control

The Pipe Stopper is a sediment control device designed to prevent sediment, trash, and animals from entering horizontal stormwater pipes. This device reduces costs by preventing the buildup of sediment and the need for costly pipe clean-outs prior to final inspections.

- Fast, easy installation and removal
- Durable and reusable HDPE frame that clips into HDPE, concrete, or corrugated pipe
- Replacement Filters Available
- Sourced and made in America
